Department of Management and Marketing

HTML Lab -Your Song (2025)

In this lab, you will practice building a basic HTML page in Visual Studio Code. Complete the HTML Lab - Part 1. Then pick one of your favorite songs (one with no explicit lyrics) and create a web page like we did in HTML Lab - Part 1. Your website should have the lyrics (search online using Google), have at least 2 hyperlinks to something in the song, have the most important chorus or hook by in <strong>, and have italics where needed. Upload your finished document to D2L by Tuesday, Feb 4 before class. You will present your webpage to the class for discussion.

You should have only 1 file to upload. The file should be named as follows:

Your Last Name – Song Name.html

For example, if I was going to do One Week, it would be:

Douglas – One Week.html

Your HTML file should have no external links other than the 2 required hyperlinks.

Use no other technologies (CSS, JavaScript) for this assignment.

It is highly advisable to use Visual Studio Code. As always, test your code before uploading. Note, whenever you upload your code to D2L, you are unable to look at it correctly on D2L. You must download your files to view them correctly because D2L injects its own HTML and CSS into your code. Please remember this throughout the semester as D2L is a learning management system and not a web server or file management system. Later in the semester, all files will need to be compressed (zipped) to one file to be uploaded, but for this assignment you can just upload your single .html file.

As you upload your file to D2L, also push the file to GitHub and put the link to your repository in the file submission comments.
